

IPOD MINI PROJECT

Build an iPod using React.js. The following are the instructions:

- Build a menu of options like you see such as Settings, Games, Music etc
- On clicking of the center button go inside the menu
- Clicking on the menu should hide the menu and open a screen of that particular option, like settings, games etc
- (Optionally) can create sub menu inside menu like in Music option, it has sub menu with options “**All songs**”, “**Artists**” etc
- Click and hold on the circular menu and move the mouse in a circular fashion inside the menu boundary (white circle is the menu) to navigate in the iPod menu
- Clicking on “**Menu**” should take you back to the main menu

Try to build it yourself first, if anyone is having any difficulty please view the hints document.

Final project should look like this - [Link](#)
