

React Test I

Total time: 3 - 4 hrs

Problem statement

Create a simple tooltip component such that when I hover over a button it shows me some tooltip

Instructions

- Create a simple tooltip component according to the gif below (on the next page)
 - On hovering of the button I should show a tooltip
 - The component will receive the '**position**' of tooltip as prop. In the GIF below position is at the bottom. We can pass options : "top", "bottom", "right", "left"
 - According to the position the tooltip should render at that position
- You are **ALLOWED** to style the switch the way you like. Do whatever you want with the styling. **ONLY** the functionality of the component should work.
- You are **ALLOWED** to google and read how to approach the problem
- **DO NOT** copy and paste code from the internet
- **DO NOT** cheat with other students, I am trusting you all for this one!
- Once you have finished with the test, make a video recording your computer screen (via phone or a software like OBS/screencastify etc) and explaining how you have approached the problem **in code and showing the final product**. The video can be **UPTO 3 mins** long. ***Please don't record videos longer than that.***
- Upload the code to github.
- Once you have recorded the video ,upload it on youtube (unlisted or whatever), drive or wherever you want to upload it and then fill out this form - <https://forms.gle/UB1iTD1FRkNFVQYNA> with the video link and the github link.

A red rectangular button with the word "Press" in white text, centered on a background of concentric circles.

Press
