Note to the Reader

Resources

This is our third webinar in the attempt to demystify the mystery around Dynamic Programming. I am sharing the links to the first two webinars.

```
First webinar on Dynamic Programming:

https://www.youtube.com/watch?v=y7Vxo_DBC2E&ab_channel=CodingNinjasIndia

Second Webinar on Dynamic Programming:

https://www.youtube.com/watch?v=tbM7z40hcK4&ab_channel=CodingNinjasIndia
```

Watch these lectures to solve the questions that I have added in the assignment. I am also providing you the notes. Please find the notes in the following contents. The language of instruction is Python in the notes. The concepts around Dynamic Programming are taught in a language independent way and I am sure that you will be able to implement the problems in your favourite programming language.

In the webinar, scheduled on 12th December, I will only discuss problems based on concepts that I have already discussed in the first two webinars. So I request you to read these notes, complete these exercises and watch the youtube webinars before coming to the webinar on 12th December.

If you have any questions, feel free to reach me at **navdeep@codingninjas.com**
Meet you at webinar on 12th December!
